Education

Biotechnology, Biological Sciences, Bachelor of Science

Kent State University, Kent

Certificates

ASCP- Technologist in Molecular Biology

Human Research Group 1- Biomedical Research Faculty, Staff, and Students- CITI Program

Skills

Next generation sequencing

Test data analysis

Written communication

Tissue Culture

Molecular and Cell Biology

Research documentation

ASCP- Technologist in Molecular Biology whose detail-oriented, well-versed in performing extractions, PCR, and next-generation sequencing. Highly organized and diligent with a systematic approach to handling specimens and conducting assessments.

Experience

2024-10 - present

Research Assistant 4

Molecular Biology and Microbiology, Case Western Reserve University, Cleveland

- Extracted high-quality DNA, RNA, and single cells from complex biological samples within a BSL2+ environment, ensuring strict adherence to biosafety protocols.
- Executed advanced single cell library preparation workflows, including Abseq, ATAC-seq, and downstream qPCR analysis.
- Streamlined laboratory workflows by implementing digital documentation and rigorous sample-tracking systems, significantly improving data organization and traceability.
- Authored, updated, and maintained standard operating procedures (SOPs) and critical lab documentation to preserve quality control standards.
- Evaluated experimental data using advanced analytical software and synthesized findings into comprehensive technical reports.
- Collaborated cross functionally with diverse research teams and lab members to support multiple concurrent projects, ensuring seamless data sharing and resource allocation.

2021-07 - 2024-10

Molecular Technologist

Tennessee Oncology, Molecular and Genomics Studies, Nashville

- Performed DNA and RNA extractions from peripheral blood, bone marrow, FFPE tissue, and plasma for high-complexity testing.
- Conducted target amplification, Next Generation sequencing, RT-PCR testing, and microarray.
- Ensured accuracy of patient information using laboratory information system.
- Analyzed and reported testing results in an efficient and timely manner.
- Developed and optimized an inventory tracking system to ensure an organized and fully stocked laboratory.
- Tested, validated and maintained scientific instruments to ensure quality and accuracy.
- Coordinated and assisted in the validation, implementation and creation of Standard Operating Procedures (SOPs) for new testing protocols.
- Identified and assisted in troubleshooting of results and identifying opportunities for improvements.

2016-01 - 2021-07

Research Assistant

McCawley Lab, Vanderbilt University, Nashville

- Curated and maintained a positive working relationship with colleagues, including the collaborative development and adoption of Standard.
- Operating Procedures (SOPs) for multiple microfluidic devices to help maintain laboratory accuracy and success.
- Conducted genotyping and breeding of mouse specimens to achieve desired physical and genetic traits, for an array of tests.
- Performed imaging, data collection, and analysis of tissue culture in order to document changes in growth, density and morphology of tumorigenic and non-tumorigenic epithelial cells.
- Maintained accurate documentation and progress of projects; tracking the timeline of changes allowing for accountability and reproduction of results.
- Fabricated Polydimethylsiloxane (PDMS) for microfluidic devices that allow

testing of up to six drug concentrations at once, allowing for direct comparison of controls and test concentrations.

2014-08 - 2015-05

Undergraduate Student Researcher

Kooijman Lab, Kent State University, Kent

- Investigated lipid-lipid interactions utilizing advanced Nuclear Magnetic Resonance (NMR) spectroscopy techniques.
- Processed and interpreted complex spectral data using TopSpin and SigmaPlot software to quantify molecular behaviors.
- Prepared high-precision biological samples and successfully replicated historical datasets to validate experimental reproducibility.
- Formulated mechanistic hypotheses regarding lipid interactions to guide experimental design and downstream analysis.
- Partnered closely with the Principal Investigator (PI) to review project milestones, troubleshoot bottlenecks, and strategize future research directions.
- Formally presented peer-reviewed research to diverse scientific audiences at national and regional symposiums.
